

CERTIFICATE

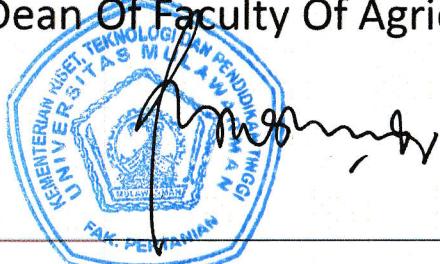

This certificate proudly present to:

Widi Sunaryo

In recognition of his/her valuable participation in
International Conference on Tropical Agrifood, Feed and Fuel (ICTAFF)
Mesra Business & Resort Hotel Samarinda, November 13-14th, 2018 as a :

KEYNOTE SPEAKER

Dean Of Faculty Of Agriculture

Dr. Ir. H. Rusdiansyah, M.Si

Chairman

Dr. Aswita Emmawati, S.TP.,M.Si

Improvement of the superior local fruits from East Kalimantan using genetic, physiological and agronomical approaches

Lai-durian

Widi Sunaryo, PhD

***Presented in International Conference on Tropical Agrifood, Feed and Fuel
Samarinda, 13-14 Nopember 2018***

Current Update and Background

Durio zibethinus (Durian),
Sunaryo et al., 2014

Durio kutejensis (Lai, Pampaken),
Sunaryo et al., 2014

Durio excelsus (Apun),
Year of Durian, 2013

- Most of genetic resources and species diversity of *Durio spp* was reported existing in Kalimantan Island.
- From a total 20 *Durio* species encountered in Indonesia, 18 species occur in Kalimantan (Uji, 2005)

Current Update and Background

Durio dulcis (Lahong),
Year of Durian, 2013

Durio oxyleanus (Kerantungan),
Sunnyo et al., 2014

Durio testudinarum (Durian Kura2),
Year of Durian, 2013
© Year of the Durian

- Due to the open pollinated characteristic, the genetic diversity of *Durio spp* is enlarging and spreading significantly
- *Durio spp* is a tropical fruit that can grow at broad range of climate and season

NUTRITIONAL VALUE OF DURIO SPP

Nutritional Value	<i>D. zibethinus</i>	<i>D. kutejensis</i>	<i>D. graveolens</i>	<i>D. oxleyanus</i>
Energy	128 - 188 Kcal	149 Kcal	152 Kcal	120 Kcal
Sugar	20,18° brix	10,8° brix	19,1° brix	15,2° brix
Protein	3,2%	4,8%	2,6%	7,7%
Lipid	3,2%	2,1%	6,2%	2,1%
Water content	62,7%	58,4%	66,7%	30,3%
Carbohydrates	31,0%	19,9%	21,5%	18,4%
Fibre	3,0%	1,4%	2,0%	1,9%
The percentage of edible part	20,5%	33,9%	30,2%	19,7%
Shelf life at room temperature	7 days	8,6 days	7 days	7 days
P	19,6 - 65,4 mg	25 mg	43 mg	13 mg
K	431,2 - 488,1 mg	362 mg	529 mg	159 mg
Ca	4,5 - 41,5 mg	19 mg	10 mg	3 mg
Mg	33 - 330 mg	19 mg	27 mg	8 mg
Fe	0,38 - 1,9 mg	0,7 mg	0,6 mg	1,7 mg
Mn	0,8 ppm	5,0 ppm	4,0 ppm	1,2 ppm
Cu	1,0 ppm	3,2 ppm	7,0 ppm	2,1 mg
Zn	1,4 ppm	7,3 ppm	5,9 ppm	1,7 mg
Vit. C	22,9 - 107 mg	15,9 mg	10,4 ppm	20,8 mg

Ref: Sunaryo et al (2015); Hoe and Siong, (1997); Brown (1997)

The most popular of edible *Durio* species in East Kalimantan is *Durio zibethinus* (*Durian, local name*) and *Durio kutejensis* (*Lai, Local Name*).

***Durio zibethinus* (Durian), general characters:**

- Sweet
- sharp Odor/fragrant
- Wet and soft Texture
- White, white yellowish, yellow, yellow Goldish
- High alkohol content while ripening
- High water content

***Durio kutejensis* (Lai, Pampaken), general characters**

- Sweet
- Odorless/ not fragrant
- Dry and Dense Texture
- Yellow until orange
- No alkohol content while ripening
- Low water content

LAI DURIAN: a new variant of *Durio* spp having high potential economic value to be improved as a National Excellent Variety from East Kalimantan

Remarkable properties and superiority

Sweet, odorless, gold yellowish, low water content, no alkohol, dry and dense texture, abnormal seeds, pink flower, many award from Durian contest. The ripe-fruit does not fall from the tree

Name: LAI DURIAN; DURIAN LAI

Local Name: Holai, Mandong, Mading

Origin: Putative Natural Crossing between *Durio zibethinus* x *Durio kutejensis* (Sunaryo et al. 2015)

Taxonomy: *D excelsus* (BPTP, Kaltim), *D. zibethinusxkutejensis* (Sunaryo et al. 2015) and *D. Connatus* (Priyanti, 2016)

Distribution: East/North Kalimantan

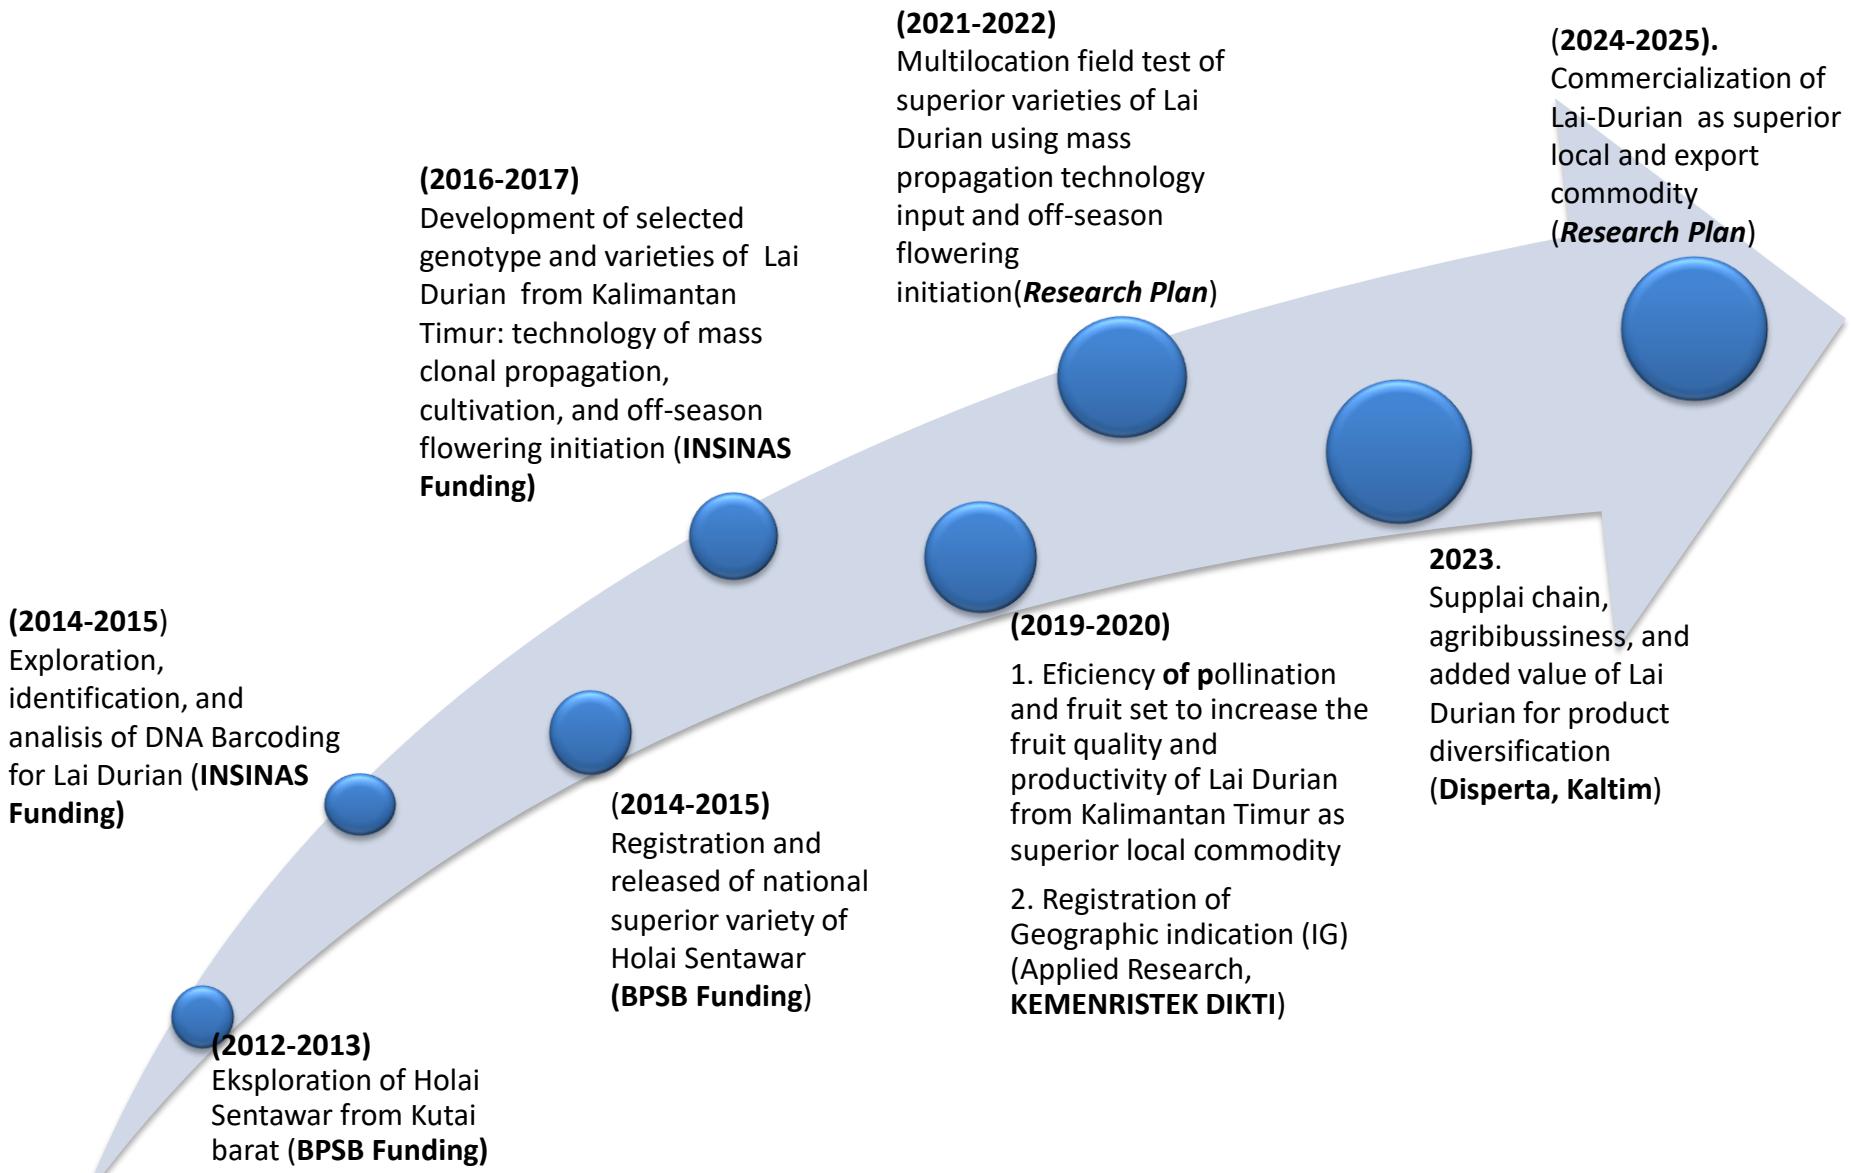

Economic value: Preferred by consumer and high price in local market

PROBLEMS for Lai-durian

- Taxonomy status is still unclear
- Misunderstanding on the origin
- The diversity and distribution is unexplored
- The economic value is still un explored
- The superior varieties released is still limited developed
- Development cultivation technology.

Lai-durian research road map 2012-2025

Our works and goals

- 1. Taxonomy clarification: exploration, identification, characterization via morphology and genetic analysis**
- 2. Diversity analysis: DNA barcoding and molecular marker**
- 3. Mass vegetative propagation**
- 4. Off-season flowering initiation technology**
- 5. Cultivation technology**
- 6. Efficiency of pollination, fertility and fruit formation investigation**
- 7. Conservation by Geographic indication registration**

Exploration

Kalimantan Island and East Kalimantan Province

Lai-durian is existing in 6 Districts of East/North Kalimantan

Lai-durian variants from east/north kalimantan

Taxonomy clarification and outlook

1. Based on plant morphology, fruit performance, and nutritional value analysis, there is strong indication that *Lai Durian* is originated from the natural crossing of *D. zibethinus* and *D. Kutejensis*.
2. *Lai Durian* fruit has positive combination properties originated from its parents (*D. zibethinus* and *D. kutejensis*) such as sweet (high sugar content), thick and attractive color (yellow) aril, soft and dry texture (low water and fiber content), not fragrant, high protein content, long shelf life at room temperature, and high percentage of the edible fruit part that are more preferred by consumers.

Mass vegetative propagation

1. *Durio sp.* is an open pollinated / cross pollinated plant.
2. Clonal propagation insures the genetic similarity of plant materials.
3. Limited seeds as rootstock sources for clonal propagation since most seed produced by lai-durian are abnormal.
4. In practice, people use seedling from Durian or Lai as rootstock sources.
5. *The grafting suitability between scions and rootstocks of such practice are uninvestigated and questioned.*

Vegetative propagation model/techniques

Experiment design and materials

No.	Scion (Lai-durian varieties)	Rootstocks (Randomly selected seedlings)	Replication	Total Experiment

Mass Propagation Recomendation

1. The chip budding had a higher percentage of successful grafting in a faster time compared to the cleft grafting.
2. Interspecific grafting between *D. zibethinus x kutejensis* as scion/bud sources and *D. zibethinus* or *D. kutejensis* as rootstocks was compatible and succesfull to make graft union.
3. The use of *D. zibethinus x kutejensis* rootstocks (homograft) resulted in the highest grafted plant growth compared to *D. zibethinus* or *D. kutejensis* roostocks (heterograft).
4. The interspecific grafting of Lai-durian using *D. zibethinus* could be recommended as an effective alternative rootstock source in the mass-clonal propagation to overcome the limited number of Lai Durian seeds.

Interspecific grafting of superior varieties of Lai-durian (*Durio zibethinus x kutejensis*) from East Kalimantan using different rootstocks

Off-season flowering initiation of Lai-Durian

1. Maximum production is reached at very limited and specific area/micro climate plantation.
2. The production is season-depended influencing the flowering initiation and fruit set formation.
3. Flowering initiation in durio sp involves the plant growth regulator transitions triggering the developmental transition processes (Crane 1969; Mutasa-Goettgens and Hedden, 2009).
4. Gibberelins (GAs) inhibition play important role in flowering initiation (Crane 1969; Erickson et al. 2006; Mutasa-Goettgens and Hedden, 2009; Randoux et al. 2012).
5. Some Plant growth regulators (*Especially Retardant*) can trigger flowering initiation by inhibition of Gibberellins accumulation. Such as Paclobutrazol, Prohexadione-Ca, Auxins (Crane 1969; Darmawan et al. 2014);
6. Environmental stress such as pest and disease attack/infection, water stress, mechanical wounds can also trigger flowering initiation.
7. Strangulation) could trigger flowering initiation by inhibition of photosynthetic transportation in the plant stem (Susanto et al. 2002; Putra 2002)

Methods:

Treatment	Concentration/Dosage	Application	References
Control	-	-	-
Paclobutrazol	2 g/plant in 1 L water	Flushing to the soil surrounded the plant	Efendi (1994), Susanto & Poerwanto 1999, Sakhidi et al. (2011)
Prohexadione-Ca	500 ppm/plant in 1 L water	Spraying to the leaves	Kofidis et al 2008
Strangulation	2 mm-iron wire coiled 3 times for 1 month	At the main stem 1 meter above soil surface	Susanto et al. (2002) Putra (2002)
Gibberelin (GA3)	20 ppm	Spraying to the leaves	Hasan et al. (2010)

Methods: Organic fertilization before treatment

Methods: Anorganic fertilization before treatment

Methods: mechanical treatment (strangulation)

Methods: Plant growth retardant treatment (spraying)

Off-season Initiation recommendation

- All off-season flowering treatments could trigger the Lai-durian flowering and fruit set formation successfully except for strangulation.
- Ca-prohexadion treatment could produce the highest number of harvested fruit per plant
- Optimum Dosage: 60 kg organic fertilizer per plant per year + 60 kg Dolomit per plant per year + 500 kg NPK (15 N 15 P 15 K) per plant per year + Micro fertilizer (Mn, Cu, Zn, dan Bo) as recommendation dosage.

Off-season flowering initiation of Lai-Durian (*Durio zibethinus x kutejensis*) from East Kalimantan using growth regulator and mechanical manipulation

Abstract

The limited factor in increasing most local fruits mainly *Durio* spp. is season-depended factors influencing the flowering initiation and fruit set formation. Flowering involve in plants generally involves the plant growth regulator transitions triggering the developmental transition processes. This research report the off-season flowering initiation of Lai-Durian (*Durio zibethinus x kutejensis*) from East Kalimantan using plant growth regulator and mechanical manipulation such as Gibberellin (GA3), Paclobutrazol (retardant), Prohexadione-ca (retardant), and stem strangulation (mechanical treatment). GA3 was applied at 20

Diversity analysis using DNA barcoding

- 1. Taxonomy status is unclear: misunderstanding on the origin, the diversity and distribution is unexplored.**
- 2. Identification of plants using a short sequence of genes whose position in the genome has been standardized (mutually agreed) which is called as " DNABarcode".**
- 3. Alternative plant identification that is fast, accurate, and not ambiguous (biased).**
- 4. Requires a small number of samples and in principle DNA can be taken from any part of the plant**

Ongoing: Diversity analysis using DNA barcoding

FRUIT PERFORMANCE OF DURIO SPP

Durio zibethinus (Durian),
Sunaryo et al. (2015)

- Δ Size: small – very big
- Δ Flesh: thick - very thick
- Δ Flesh Colour: White – yellowish
- Δ Odorness: medium – very sharp
- Δ Alcohol content: medium – very high
- Δ Texture : soft, wet
- Δ Water Content: high
- Δ Taste: Sweet – bitter
- Δ Shelf life : short - long

Durio kutejensis (Lai, Pampaken),
Sunaryo et al. (2015)

- Δ Size: small – small -medium
- Δ Flesh: thick - very thick
- Δ Flesh Colour: orange
- Δ Odorness: odorless
- Δ Alcohol content: no alkohol
- Δ Texture : soft, dry
- Δ Water Content: low
- Δ Taste: medium - sweet
- Δ Shelf life : very long

Durio excelsus (Apun),
Year of Durian, (2013)

- Δ Size: very small
- Δ Flesh: thin
- Δ Flesh Colour: orange
- Δ Odorness: odorless
- Δ Alcohol content: no alkohol
- Δ Texture : soft, dry
- Δ Water Content: low
- Δ Taste: medium - sweet
- Δ Shelf life : very short

FRUIT PERFORMANCE OF DURIO SPP

Durio dulcis (Lahong),
Year of Durian (2013)

- Δ Size: medium
- Δ Flesh: thin
- Δ Flesh Colour: white - yellowish
- Δ Odorness: odorless - medium
- Δ Alcohol content: medium
- Δ Texture : soft, wet
- Δ Water Content: high
- Δ Taste: medium - sweet
- Δ Shelf life : short - medium

Durio oxleyanus (Kerantungan),
Year of Durian (2013)

- Δ Size: small
- Δ Flesh: thin - thick
- Δ Flesh Colour: yellowish
- Δ Odorness: odorless - medium
- Δ Alcohol content: medium
- Δ Texture : soft, wet
- Δ Water Content: high
- Δ Taste: medium - sweet
- Δ Shelf life : short - medium

Durio testudinarum (Durian Kura2),
Year of Durian (2013)

- Δ Size: small
- Δ Flesh: thin
- Δ Flesh Colour: white - yellowish
- Δ Odorness: sharp
- Δ Alcohol content: high
- Δ Texture : soft, wet
- Δ Water Content: high
- Δ Taste: medium – sweet - bitter
- Δ Shelf life : short - medium

FRUIT PERFORMANCE OF DURIO SPP

Durio glandiflorus (Sukang),
Year of Durian (2013)

- Δ Size: small
- Δ Flesh: thin
- Δ Flesh Colour: Dark red
- Δ Odorness: odorless - medium
- Δ Alkhol content: medium
- Δ Texture : soft, dry
- Δ Water Content: low
- Δ Taste: medium - sweet
- Δ Shelf life : short - medium

Durio graveolens (Red),
Year of Durian (2013)

- Δ Size: small
- Δ Flesh: thick
- Δ Flesh Colour: Dark red
- Δ Odorness: odorless
- Δ Alkhol content: no alkohol
- Δ Texture : soft, dry
- Δ Water Content: low
- Δ Taste: medium - sweet
- Δ Shelf life : medium

Durio graviolens (Yellow),
Year of Durian (2013)

- Δ Size: small
- Δ Flesh: thick
- Δ Flesh Colour: orange
- Δ Odorness: odorless
- Δ Alkhol content: no alkohol
- Δ Texture : soft, dry
- Δ Water Content: low
- Δ Taste: medium - sweet
- Δ Shelf life : medium

Aplikasi pemupukan berimbang

- Kontrol: 30 kg pupuk kandang per tanaman
- b. Setengah dosis: 30 kg pupuk kandang per tanaman per tahun + 30 kg Dolomit per tanaman per tahun + 250 kg NPK (15 N 15 P 15 K) per tanaman per tahun + Aplikasi pupuk Mikro (Mn, Cu, Zn, dan Bo) sesuai dosis anjuran kemasan.
- c. Dosis anjuran (Santosa, 2013): 60 kg pupuk kandang per tanaman per tahun + 60 kg Dolomit per tanaman per tahun + 500 kg NPK (15 N 15 P 15 K) per tanaman per tahun + Aplikasi pupuk Mikro (Mn, Cu, Zn, dan Bo) sesuai dosis anjuran kemasan
- d. Over dosis: 90 kg pupuk kandang per tanaman per tahun + 90 kg Dolomit per tanaman per tahun + 750 kg NPK (15 N 15 P 15 K) per tanaman per tahun + Aplikasi pupuk Mikro (Mn, Cu, Zn, dan Bo) sesuai dosis anjuran kemasan

Sequencing and Diversity analysis are in progress

Hal : Pemberitahuan Persyaratan Formalitas Telah Dipenuhi

Yth. LPPM Universitas Mulawarman
Jl. Krayan No. 1, Kampus Gn. Kelua, Universitas
Mulawarman, Samarinda" Kalimantan Timur 75119

Dengan ini diberitahukan bahwa Permohonan Paten:

Tanggal Pengajuan : 07 Desember 2017

(21) Nomor Permohonan : S00201708791

(71) Pemohon : LPPM Universitas Mulawarman

(54) Judul Invensi : KOMPOSISI BUFFER EKSTRAKSI DNA DAUN TANAMAN DURIAN PADA METODE EKSTRAKSI TANPA MENGGUNAKAN NITROGEN CAIR DAN PHENOL

(30) Data Prioritas :

(74) Konsultan HKI :

(22) Tanggal Penerimaan : 07 Desember 2017
