## COMMENTS

- Your comments will be used to assist the author(s) in revising his/her/their manuscript.
- Do not reveal your name in your Comments; these comments may be passed on directly to the author.
- Separate your comments into the following two sections:
  1. Suggestions which would improve the quality of the paper but are not essential for publication:

This paper needs serious improvement. Constructive comments and recommendations by reviewers should be applied. Please highlight any revisions referring to the manuscript under review (file attached).

2 Changes which must be made before publication:

5 (five) points that must be corrected.

**TITLE.** Make the title more adequate to the contents. Avoid geographical terms.  
Send paper for language editing and proofreading-many errors.

**INTRODUCTION.** Preamble of the paper is not appealing. Author should also develop the context of the study, the major contribution of the research. Motivation for the study should be extended.

**RESEARCH MODEL.** Literature review is narrow. It should be background for the hypothesis or scientific questions elaboration. Author should further develop.

**METHODS.** There is no such kind of supporting citation relevant to the approach and method of data analysis.

**RESEARCH FINDINGS.** Results and discussion should be extended with some more foreign comparison.

**CONCLUSION AND POLICY IMPLICATION.** The author should add practical recommendations, study limitations, and future study directions.

3. Confidential comments only for the editor:

Dear editor of IJBPM. Thank you for inviting and trusting me to review this article. Of course this is also a valuable opportunity. To show proof that I have carried out the work as a reviewer, can I obtain some kind of proof (certificate)? I need this as an academic report to the University.

Best wishes,  
Mr. Purwadi Purwadi
